STEVEN CUFF CONSTRUCTION / LAKE NORMAN

AQUA TECHNICS POOLS

Australian engineering. Made for Lake Norman living.

A thoughtfully engineered fiberglass pool for a more considered backyard.

LAKE NORMAN BACKYARD CONCEPT

Bring a new level of engineering to your backyard. Aqua Technics combines decades of Australian pool-making experience with a wide range of fiberglass designs. Steven Cuff Construction is proud to introduce the collection to Lake Norman homeowners.

THE DIFFERENCE IS BUILT IN

A reinforced perimeter, structural ribbing and supported steps work together as one engineered pool shell.

Aqua Technics describes its 200 mm (about 8-inch) integrated fiberglass edge beam as standard across its pool range. The beam forms a substantial perimeter for decking and pavers, while the full-size wall ribs and step supports reinforce the shell.

01 / INTEGRATED EDGE BEAM

Structural concept illustration · not to scale

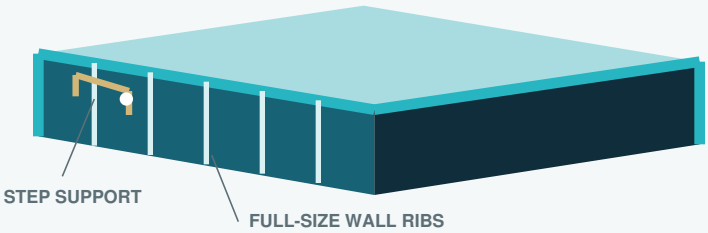

WHAT IT MEANS

The edge beam is part of the pool structure, not an add-on trim. Aqua Technics says its design can remove the need for a separate concrete ring beam.

INSTALLATION IS SITE-SPECIFIC

Backfill, ground conditions and local engineering requirements should be reviewed for every project.

02 / STRUCTURAL RIBBING & STEP SUPPORT

DETAILS THAT COMPLETE THE DESIGN

GRAPHENE NANO-TECH®
Strength-focused shell technology.

POOL COLORGUARD®
Surface protection for lasting color.

DESIGN CHOICE
A broad collection of shapes and sizes.
